

Senior Software Engineer with 10 years of experience building visual CMS platforms, developer tooling, and complex web applications using React, TypeScript, Node.js, and Kotlin. Contributor to Builder.io's Agent-Native framework (6 merged PRs, including Tasks, an official template application), with hands-on experience shipping AI-powered product features. Experienced across frontend architecture, API-driven systems, and platform engineering, with a strong focus on performance, maintainability, and developer experience.

TECHNICAL SKILLS:

FRONTEND: TypeScript · React · Vue · Next.js · REST & GraphQL API integration · Vite · Design systems · a11y

BACKEND & PLATFORM: TypeScript · Node.js · Kotlin · Java · REST API design · Authentication systems · Microservices

AI & AGENTS: AI/LLM integration · AI agents · AI-assisted development (Cursor, Claude, Codex)

CLOUD & DATA: AWS · Terraform · Docker · MongoDB · Data modeling · CI/CD · Observability (New Relic, Sentry)

ARCHITECTURE: Frontend architecture · System design · Distributed systems · Performance · Testing · Developer experience

EXPERIENCE:

Open Source Contributor

Agent-Native by Builder.io

May 2026 – Present

- Contributed 6 merged pull requests across a full-stack **TypeScript/Node.js/React** codebase, including a core error-routing fix, improvements to the Content and Mail template applications, and developer tooling.
- Designed and built Tasks, a personal task manager accepted as an official template application, implementing agent-native patterns in which AI agents and the UI share the same state and actions.
- Reported security issues discovered while adopting the framework and shared product feedback directly with the Builder.io team.

Senior Frontend Engineer

Balyasny Asset Management (BAM)

Mar 2025 – Feb 2026 · Warsaw

- Designed and delivered analytical views for portfolio risk analysis, translating complex financial requirements into decision-support tools used by ~1000 users.
- Built internal **React** dashboards and an advanced **Highcharts** chart editor for exploring large-scale financial datasets with **AG Grid** and custom visualizations.
- Implemented efficient data fetching and caching using **TanStack Query**, and optimized rendering through profiling-driven virtualization and reduced DOM manipulation, keeping high-volume data views responsive.

Lead Frontend Developer

Dynamic Solutions

Apr 2021 – Feb 2025 · Warsaw

Technology consulting firm with in-house software products; provides senior-level specialists to enterprise clients.

Lead Frontend Developer

SIEMENS (GroundFog)

Feb 2024 – Feb 2025

- Led frontend development within a 10-person team (3 frontend engineers) on a multi-tenant content platform (**Vue**, **TypeScript**) powering siemens.com, mentoring through code review and partnering with enterprise engineering, product, and content teams.
- Delivered core platform features including AI-powered search, chatbots, and live translation for a global audience.
- Built and evolved a shared component platform — an internal SDK of ~30 reusable components with interactive documentation — consumed by multiple applications, improving UI consistency, reuse, and development velocity at scale.
- Improved quality and reliability by introducing automated visual regression testing (**Playwright**) integrated into CI/CD, enabling safe evolution of the shared UI platform.
- Designed URL-based environment routing, allowing developers, QA, and stakeholders to access production content across environments without manual data migration, significantly improving development and testing efficiency.

Senior Frontend Developer

MANN+HUMMEL (Diva-E)

Sep 2023 – Jan 2024

- Developed advanced product discovery features using **React**, **TypeScript**, and **GraphQL**, including VIN-based search, dimension-based filtering, and smart search across a large automotive catalog.
- Built search results, product detail pages, and 360° product visualizations, improving catalog navigation.

Lead Frontend Developer

WebSight CMS

Apr 2021 – Aug 2023

- Led frontend development of a visual CMS platform built with **React**, mentoring 4 frontend engineers and working closely with designers and backend engineers on **REST APIs** and platform architecture.
- Designed and built a true WYSIWYG page editor using an overlay system synchronized with an iframe-rendered page.
- Led evolution of the frontend platform, including migration to **TypeScript** and **React Hooks**, refactoring of the editor architecture and state management, and an ESM-based plugin SDK.
- Delivered core CMS capabilities including inline editing and content tree interactions while evolving a plugin-based editor architecture (6 editor plugins) and ensuring embedded pages rendered correctly inside the editing environment (e.g., normalizing viewport units inside an iframe).

Software Engineer

OLX Group

Dec 2019 – Jan 2021 · Poznań

- Developed authentication systems for a large-scale marketplace using **Kotlin**, **Java**, **REST APIs**, and **AWS Cognito**, implementing core user flows including login, registration, and password recovery.
- Contributed to migration of millions of users to **AWS Cognito** while introducing security features such as suspicious login detection.
- Designed secure internal tooling enabling Customer Support to manage blocked accounts independently, eliminating 15–20 daily engineering interventions.
- Improved observability and error tracking using **New Relic** and **Sentry**.

Full-stack Web Developer

No Spoon Tech Lab

Jun 2018 – Aug 2019 · Spain

- Built a real-time messaging platform for an online gaming product using **React**, **KotlinJS**, and the **XMPP** protocol — message synchronization, presence handling, and live updates across connected clients.
- Implemented custom server-side rendering for the **React** application in **Node.js**.

Junior Frontend Developer

Appchance

Jan 2018 – May 2018 · Poznań

- Developed reusable UI components and client-side features using **JavaScript** and **Ember.js** across multiple projects.

Junior Java Developer

Pearson IOKI

Jul 2016 – Dec 2017 · Poznań

- Developed **REST APIs** for an e-learning platform using **Java**, **Kotlin**, and **MongoDB** within a microservice architecture, working in cross-functional **Scrum** teams (~20 engineers across two collaborating teams).

EDUCATION:

MSc in Computer Science (Distributed Systems)

Analysis and optimization of the communication mechanism between applications in distributed systems using the RPC model

Poznań University of Technology, Poland
